

# AJAX example

This example demonstrates how to display a short message on your working websites from another file with help of ajax script

Step 1: Run XAMPP application

Step 2: create a new html (ajaxexample.html) file and store it in “htdocs” holder

Step 3: update the file with given code

```
<html>
<head>
<title> Ajax Example </title>
<style>
body {
    font-family: Helvetica;
    text-align: center;
}

#birthday-greeting {
    font-size: 72px;
    color: red;
    text-transform: uppercase;
}
</style>
```

```
<script>
var myRequest = new XMLHttpRequest();
myRequest.onreadystatechange = function () {
    if (myRequest.readyState === 4) {
        document.getElementById('ajax-content').innerHTML = myRequest.responseText;
    }
};

function sendTheAJAX() {
    myRequest.open('GET', 'surprise.html');
    myRequest.send();
    document.getElementById('reveal').style.display = 'none';
}
</script>

</head>
```

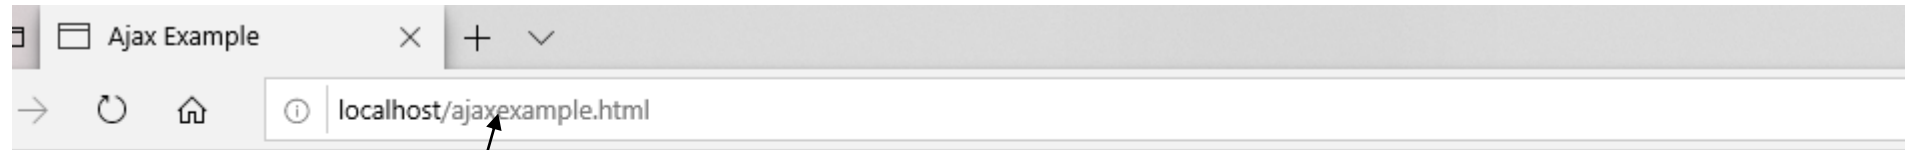

```
<body>
  <h1>Today's your special day!</h1>
  <button id="reveal" onclick="sendTheAJAX()" class="button">Why's that?</button>
  <div id="ajax-content">
    </div>
</body>
</html>
```

Step 4: create another file html file (surprise.html) and keep it in htdocs folder

Step 5: update the file with the given code

```
<html>
<head>
</head>
<body>
<h1 id="birthday-greeting">It's your birthday!</h1>
</body>
</html>
```

Run  
ajaxexample.html

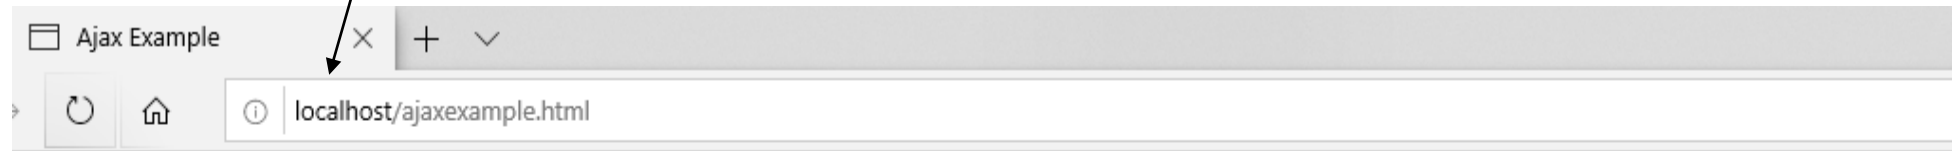

Today's your special day!

CLICK

Why's that?

Same  
ajaxexample.html  
with additional  
content

Today's your special day!

**IT'S YOUR BIRTHDAY!**
